

"I am never without my iPhone®, so I can always dictate. I do not have to mail a tape, download from a unit, or wait until I am in the office to hand in one. I love it!"

-Dr. Klein
Promedica

"The interface is MUCH better than a handheld device. For example, inserting text into the middle of a dictation is incredibly easy and intuitive - I could never do it properly with a handheld device. It's quite amazing."

-Dr. Teitel
UCSF Medical Center

AcuMobile for the iPhone

- One-time fee of \$4.99
- Send dictations instantly and wirelessly at the time of dictation
- Decreased TAT
- Carry one device – Your iPhone!
- Edit your dictation with ease by using the slider bar to get to the desired section
- View and edit your patient schedule on your iPhone
- Track and review completed reports from your phone

Handheld Dictation Device

- A handheld device can cost as much as \$500
- To send a dictation, you must connect the device to your computer and wait for the dictation to download
- Increased TAT
- You have to carry an additional device just to dictate
- Moving thorough the dictation to insert or edit a section is a slow, multi-step process
- You can't view your schedule on a handheld device
- A handheld device is just for dictating
